# Representations of Time

(paraphrasing Isabel Meirelles)

Time is an abstract concept, and thus, not particularly visual.

We imagine time as a stationary line we travel along, or as a moving object coming towards us.

Because time is most often measured against the moving sun, moon and stars, the structure of many visualizations is cyclical, and sometimes both cyclical and linear.

In tables time can be read in both ways.

				LINEAR
Winter 2002	Spring 2002	Summer 2002	Fall 2002	
Winter 2003	Spring 2003	Summer 2003	Fall 2003	
Winter 2004	Spring 2004	Summer 2004	Fall 2004	
Winter 2005	Spring 2005	Summer 2005	Fall 2005	
CYCLICAL				

Time is most often seen in the direction you read.

## Wikipedia Says...

12 hour day comes from Egyptians who used base 12. Counting, with the thumb, the knuckles on the other 4 fingers results in 12.

The 7 day week is derived from the creation narrative told by The Book of Genesis, and spread through the adoption of Christianity by Roman Emperor Constantine.

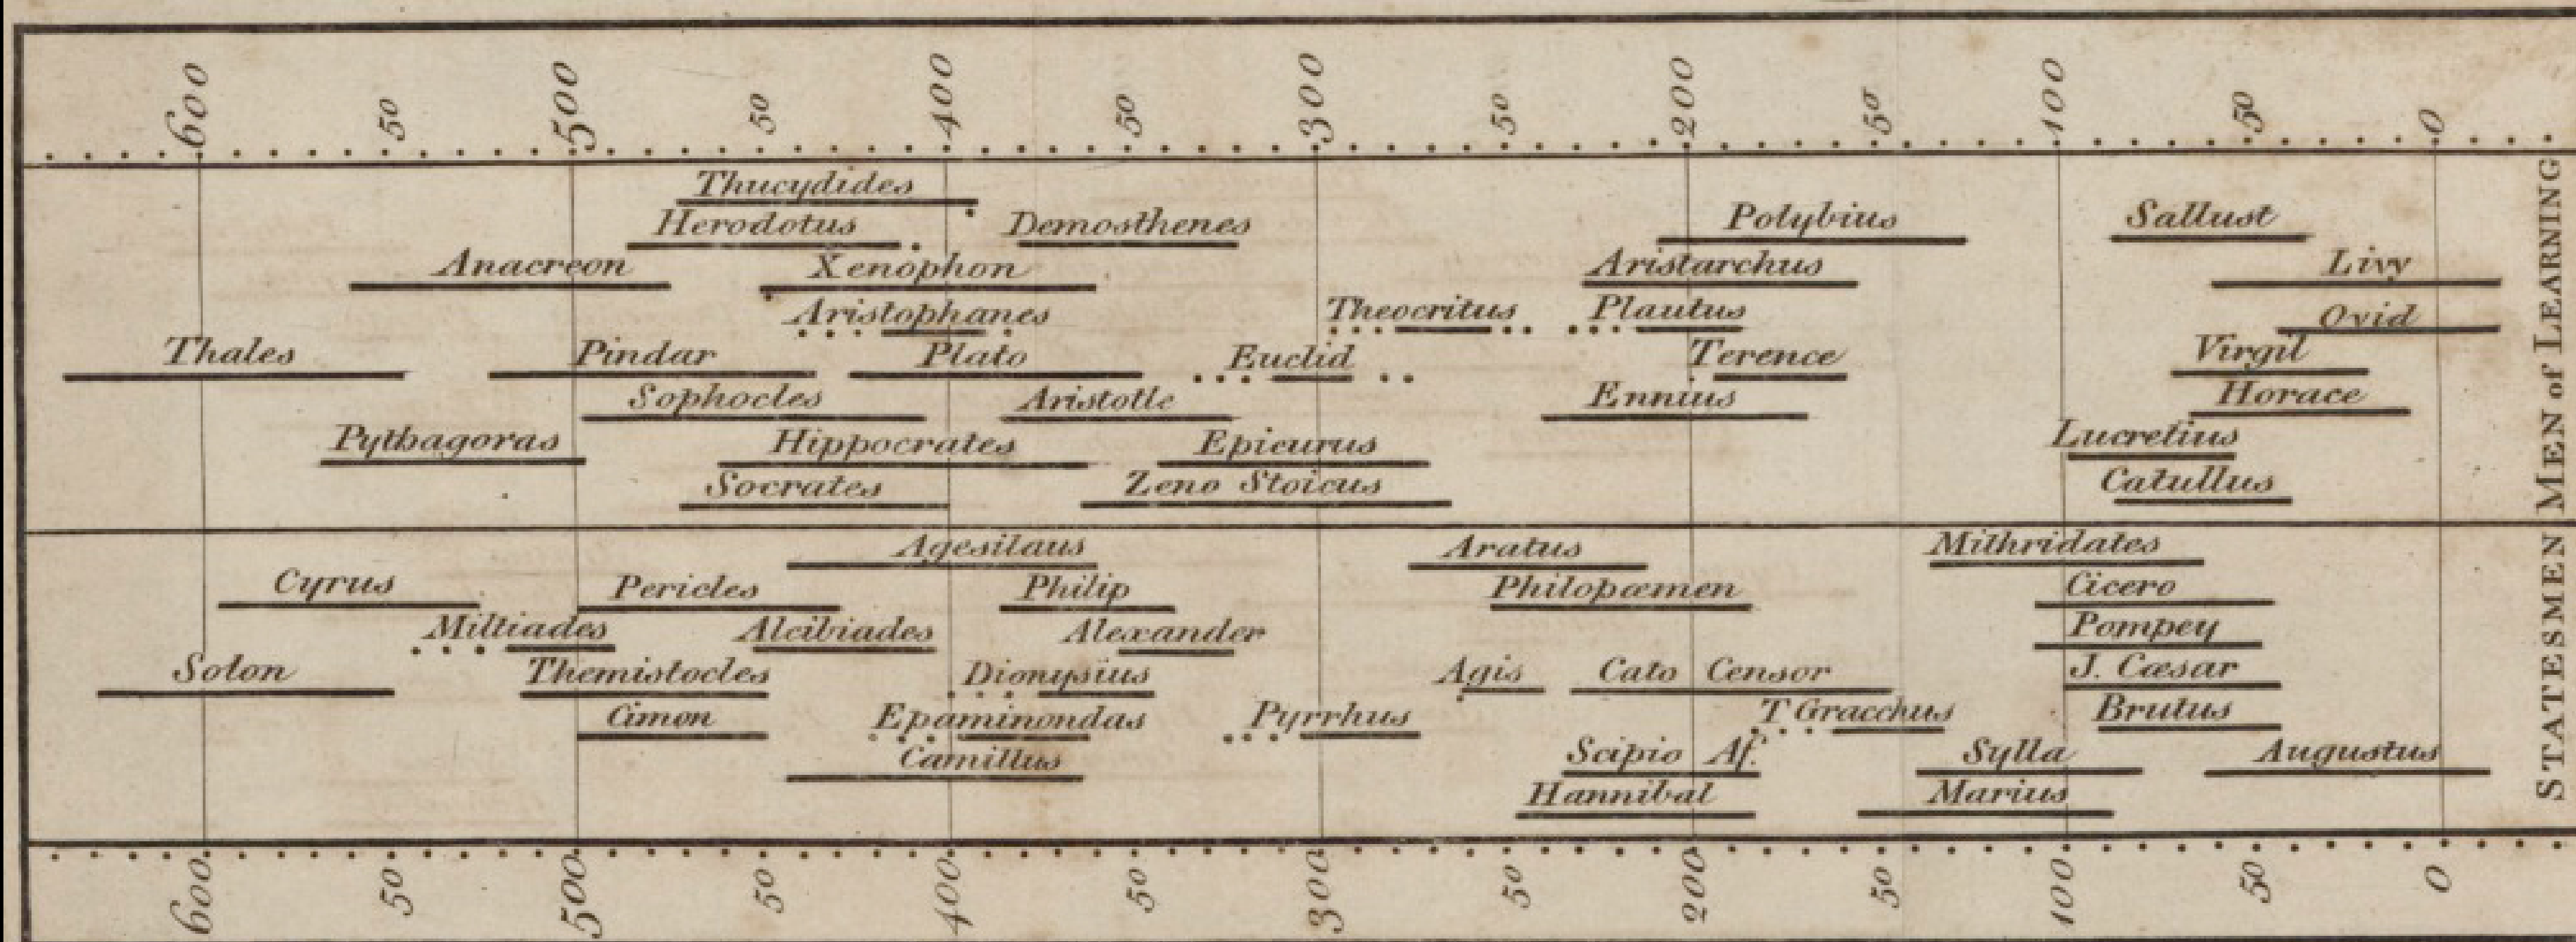

12 months per year is based on a 12 lunar cycles per year.

### Minutes and Seconds:

The Greek astronomer Eratosthenes (who lived circa 276 to 194 B.C.) used a sexagesimal system to divide a circle into 60 parts in order to devise an early geographic system of latitude, with the horizontal lines running through well-known places on the earth at the time...

It was not practical for the general public to consider minutes until the first mechanical clocks that displayed minutes appeared near the end of the 16th century.

DIAGRAM OF THE CAUSES OF MORTALITY  
IN THE ARMY IN THE EAST.

The Areas of the blue, red, & black wedges are each measured from the centre as the common vertex.

The blue wedges measured from the centre of the circle represent area for area the deaths from Preventible or Mitigable Zymotic diseases, the red wedges measured from the centre the deaths from wounds, & the black wedges measured from the centre the deaths from all other causes.

The black line across the red triangle in Nov<sup>r</sup> 1854 marks the boundary of the deaths from all other causes during the month.

In October 1854, & April 1855, the black area coincides with the red; in January & February 1855, the blue coincides with the black.

The entire areas may be compared by following the blue, the red & the black lines enclosing them.

Harrison & Sons, St. Martin's Lane.
